

1. The first step is to identify the problem or goal. This involves understanding the current situation, the desired outcome, and the constraints that may be involved.

2. The second step is to generate potential solutions. This can be done through brainstorming, research, or consulting with experts. It's important to consider a wide range of options, even those that may seem unconventional.

3. The third step is to evaluate the potential solutions. This involves weighing the pros and cons of each option, considering the resources available, and assessing the potential risks and benefits.
